

SANIFICATION SYSTEM

SANIFICATION SPRAY BOOTH

SPRAY BOOTH FOR SANIFICATION AND DISINFECTION

The **SANIFICATION SPRAY BOOTH** uses new technology specifically designed to make environments and surfaces safer.

The **SANIFICATION SPRAY BOOTH** allows the rapid and continuous disinfection of people in access to safe and secure places such as hotel premises, nursing homes, supermarkets, airports, shops, industrial companies and any other premises with large flow of people.

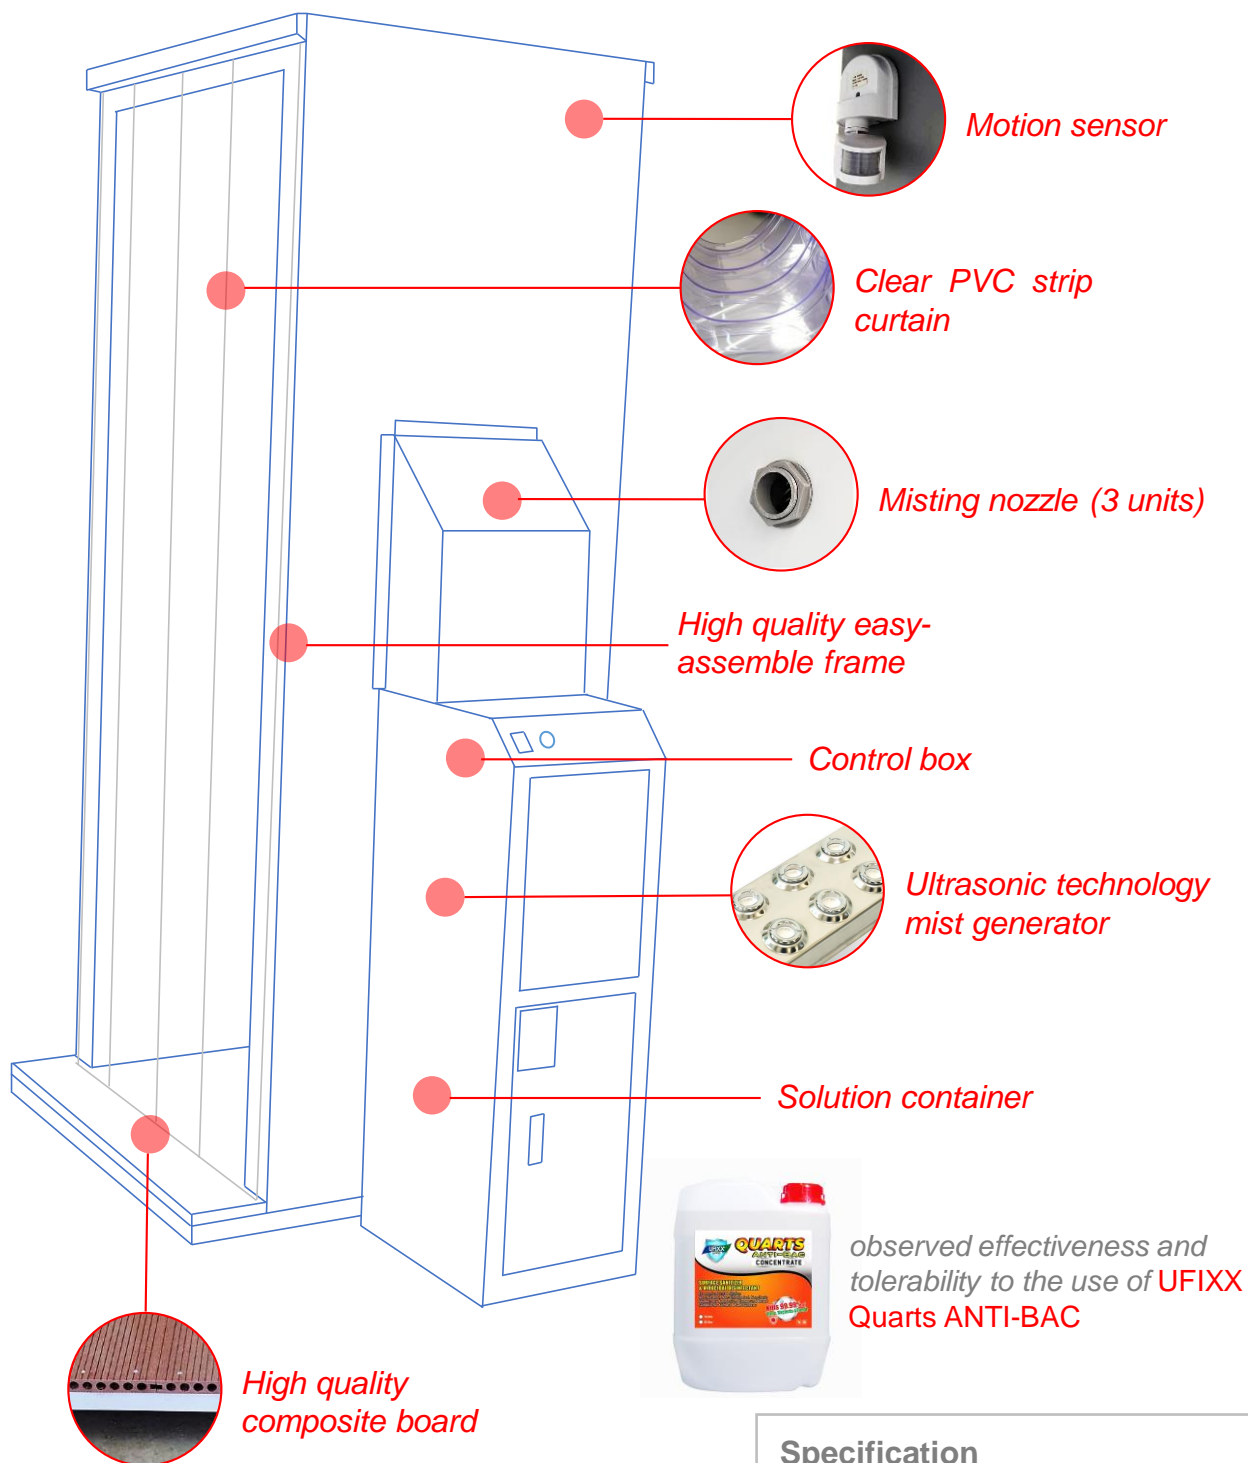

SANIFICATION SPRAY BOOTH is designed for rapid deployment and does not require complex installation procedures, it is self-supporting and is powered by a regular 220/240 V electrical cable. It has very fast ground laying and can be easily operated without requirement much technical knowhow.

During the passage of people it is also possible to treat and sanitise the entire exposed surface of the person within 10-30 seconds (depending on the settings preferred). The **SANIFICATION SPRAY BOOTH** can be set to operate with automatic photocell activation which limits and conserves the consumption of disinfectant to the strictest minimum necessary, avoids any contact between control staff and users, and is able to manage large flow of people.

Every company that operates the system can freely choose the sanitizing liquid to use, according to the specific needs of each particular case. However, the has observed effectiveness and tolerability to the use of **UFIXX Quarts ANTI-BAC**, which is able to provide all the necessary information to health care professionals.

ATTENTION: comply with the manufacturer's instruction for the sanitizing liquid.

SANIFICATION SPRAY BOOTH
